

Wigrex Dry Steam Cleaners

Super Steam 9000 / 18000 Watt

The steamers of the Super Steam series can be used as a steamcleaner or as an industrial steam generator. These powerful 9000 and 18000 Watt machines generate a large amount of steam at high temperatures for numerous applications in the industry.

For this professional range only high-quality parts, materials and couplings are used. Decades of experience and years of development create a reliable, user-friendly and effective steamer, which comes with an appropriate layout of the machines. The adjustable system for the injection of detergents and the large watertank are standard for these 400V versions. It is also possible to adapt the machine to other specific demands, such as an automated water filling system, extremely wet steam production, water injection and many other requests.

The bodywork, advanced electronics and other high-grade materials show that this range has been designed for the professional and industrial market.

If necessary the environment-friendly Wigrex products can be used to quickly remove persistent greases, oil, chewing gum, paraffin, lime, moulds, oxidations, sugar remains, chocolate remains, graffiti, stickers, etc. Furthermore, steam cleaners consume a minimal amount of water, contradictory to high-pressure cleaners that easily make a wet affair. Therefore, steam cleaning is often used in the food industry with its strict HACCP norms!

Advantages

- Multi-purpose cleaner
- Quick and easy cleaning in case of maintenance work
- Low water usage. As a result environmentally friendly and therefore less disposal costs
- Strong stainless steel bodywork
- Modern electronic control
- Stainless steel boiler with high-quality heating elements
- Heating elements welded into the boiler to prevent leakage through gaskets or seals
- Adjustable system for the injection of detergents
- All functions directly controlled on the pistol at safe, low voltage
- Disinfectant effect
- An even better cleaning result with our special detergents
- Large water and detergent tank in stainless steel
- Easy accessible servicepanel
- Very solid accessories

Technical details

Model	9000 SC	18000 SC
Voltage	400V	400V
Capacity	9000 Watt	18000 Watt
Steam pressure	10 bar	10 bar
System temperature	180°C	180°C
Cleaning time	continuously	continuously
Water usage(l/h)	12	23
Detergent pump	yes	yes
Capacity water tank	50 liters	50 liters
Capacity detergent tank	5 liters	5 liters
Steam outlet	adjustable	adjustable
Boiler	stainless steel	stainless steel

Cleansing agents

For optimal results, we advise to use our cleansing agents because other cleansing agents settle or lose their effectiveness when heated! Furthermore, our cleansing agents are biodegradable and not aromatic, so there is no bad smell or irritation from heating.
